### ACCESSING TUBERCULOSIS IN CHILDREN PREVENTION & CONTROL SERVICES

### **Service Information**

Unlike adults, screening and establishing the diagnosis of tuberculosis in children is difficult, complex and remains a challenge. However, World Health Organizations (WHO) recommends some approaches to diagnose TB in children.

- A. Careful History and Clinical Examination.
- B. Bacteriological Confirmation whenever possible.
- C. Tuberculosis Skin Testing (TST).
- D. Other Diagnostic tools relevant for suspected Extra Pulmonary TB.

Children are treated in essentially the same way as adults using appropriate adjusted dosage of the drugs. The aim of chemotherapy is to provide the most effective treatment that would rapidly and fully eradicate tubercle bacilli at the shortest period of time with the minimum interference with the patients' daily activities.
